PROJECT SYNCBLEND (C3S)

Introduction

This report will outline all the elements covered in the project canvas which provides an overview of the C3S project. The C3S project is based on problems identified and faced by Heritage Lanka company. Heritage Lanka Company is a coconut-based manufacturing company. After the discussion with Ms. Angela Jayathilake, Director of Marketing and Administration, the problems identified were stock outs occurring during production and communication issues with suppliers. Prioritizing these issues C3S project was introduced to Heritage Lanka Company using Design Thinking. C3S is an integrated portal designed by our team, as a solution to problems identified. This report will provide a comprehensive explanation of the C3S project.

Prototype of the platform: https://lnkd.in/emW4aBMS

Executive Summary

Heritage Lanka Pvt Ltd has faced some tough challenges with its supply chain, including disruptions, communication breakdowns, and stockouts. To tackle these issues, we've created the C3S Portal Platform—a cutting-edge solution designed to streamline and enhance the entire supply chain process.

What is C3S (Comprehensive Supply Chain Solution)?

C3S brings advanced technology into play to create a unified platform that makes communication between Heritage Lanka and its suppliers seamless. It offers sophisticated tools for tracking supplier performance, providing real-time inventory notifications, and managing orders efficiently. The goal is to ensure everyone involved—both inside and outside the company—is on the same page, promoting transparency and proactive decision-making.

Key Features and Benefits:

1. **Smooth Communication:** C3S ensures real-time, hassle-free communication between Heritage Lanka and its suppliers, reducing the risk of misunderstandings and delays.
2. **Supplier Performance Tracking:** The platform offers detailed performance metrics, enabling proactive management and improvement of supplier relationships.
3. **Real-Time Inventory Updates**: Instant updates on inventory levels help prevent stockouts and overstocking.
4. **Efficient Order Management:** C3S automates the order management process, ensuring timelyand accurate order fulfillment.
5. **Operational Efficiency:** By automating key supply chain processes, C3S reduces manualworkloads and minimizes errors, leading to better operational efficiency.

6. **Cost Control:** The system helps manage production demands while controlling costs, ensuringresources are used effectively.

7. **User-Friendly Interface:** Designed with both vendors and business staff in mind, the

8. C3Splatform offers an intuitive, easy-to-use interface.

9. **Transparency and Proactive Decision-Making:** C3S promotes transparency across the supply chain and supports proactive decision-making by providing comprehensive data and analytics.

The main goal of the C3S portal is to boost Heritage Lanka's operational efficiency and reliability. With real-time updates, detailed analysis, and extensive performance measurements, C3S ensures that the right products are always available at the right time. This automation and streamlining of supply chain operations help Heritage Lanka stay competitive in the market.

What is C3S?

The C3S portal platform is a cutting-edge solution created to meet the pressing issues Heritage Lanka Pvt Ltd has, including supply chain disruptions, communication breakdowns, and stockouts. With the help of our project, the business and its suppliers will be able to communicate seamlessly while receiving sophisticated supplier performance tracking, real-time inventory notifications, and effective order management. Utilizing state-of-the-art technology, C3S guarantees that all parties involved— internal and external—are unified on a single platform, encouraging openness and anticipatory decision-making.

To avoid stockouts and meet production demands while controlling costs, the main goal of the C3S portal is to improve operational efficiency and dependability. Featuring real-time updates, statistical analysis, and extensive performance measurements, this system provides an easy-to-use interface for both vendors and business staff. C3S enables Heritage Lanka to keep a competitive edge by automating and streamlining supply chain operations and guaranteeing that the appropriate products are always accessible at the precise moment.

Project Details

Purpose of the Project

The purpose of project C3S (Connect, Collaborate, Streamline), is to develop the C3S System to address supplier management inefficiencies. It provides a centralized platform to streamline communication with both existing and potential suppliers, ensuring clarity and reducing delays. This system will include an order management module to minimize inaccuracies and enhance order fulfillment accuracy, thereby improving customer satisfaction. Moreover, C3S will incorporate advanced inventory management tools that enable real-time monitoring and precise demand forecasting, helping to prevent stockouts and overstock situations. An integral feature of C3S is the inclusion of both existing company suppliers and the identification of potential new suppliers, facilitating easy access to contingent suppliers. The system will also establish a robust framework for tracking supplier performance using key performance indicators (KPIs), allowing the company to proactively manage and improve supplier relationships. Furthermore, advanced analytics and reporting tools within C3S will provide detailed insights into supplier performance, inventory trends, and overall supply chain efficiency, supporting data-driven decision-making and strategic planning.

Project Scope

1. **Requirement Analysis**

- **Gathering Requirements -**
    - The resource team collaborates with the external development firm to conduct interviews with stakeholders, including Heritage Lanka's management, supply chainteam, and key suppliers.
    - Clearly communicate the specific needs, challenges, and expectations related to suppliercommunication, order management, inventory control, and analytics.

- **Feasibility Studies -**
    - The project team will conduct technical, financial, and operational feasibility studies toensure the project can meet all defined requirements.
    - Assess potential risks and resource availability, considering technological constraintsand budget limitations.

2. **System Design**

- **Overall System Architecture:**
    - The development firm will define the system's architecture, ensuring it meets the scalability and flexibility requirements for future expansion and integration with othersystems.

- **UI/UX Design:**
    - The firm will develop wireframes and prototypes for the user interface, focusing onusability and accessibility.
    - Design reviews will involve the project team to ensure the interface meets user needsand provides a seamless experience.

- **Stakeholder Review and Approval:**
    - Present the system design and UI/UX prototypes to stakeholders for feedback.
    - Incorporate stakeholder feedback into the final design and obtain formal approvalbefore moving to the development phase.

3. **Development**

- **Development Environment Setup -**
    - The external firm will establish the necessary development environment, includingservers, development tools, and version control systems.

- **Coding Standards and Best Practices -**
    - Resource and Risk Manager along with the compliance team ensures that the development firm adheres to defined coding standards and best practices for maintainability, readability, and efficiency.

- **Modular Development -**
    - The firm will develop the system in modular components, with clear milestones forfeatures like registration modules, communication platform, order management, inventory control, and analytics.

4. **Testing**

- **Unit Testing -**
    - The external firm along with the Operations team will conduct unit testing forindividual components to ensure functionality and reliability.

- **Security Testing -**
    - Along with the Project team representatives, perform security testing, including penetration testing and code reviews, to identify and mitigate vulnerabilities.

- **User Acceptance Testing (UAT) -**
    - Key stakeholders will participate in UAT to validate the system's functionality,usability, and performance.
    - Feedback from UAT will guide final adjustments and refinements.

- **Pilot Testing -**
    - Conduct a pilot test with a select group of users to simulate real-world use cases, allowing the development firm to make final adjustments before full deployment.

5. Deployment

- **Production Environment Deployment -**
    - The development firm will deploy the system to the production environment, ensuringall configurations, including security settings, are correctly applied.

- **Post-Deployment Monitoring -**
    - The development firm, in collaboration with the project team, will monitor the systemclosely during the initial period to identify and resolve any issues.

6. Training

- **Training Materials and User Guides -**
    - The external firm, in collaboration with the Customer Relations Manager and team, will develop training materials, including manuals, video tutorials, and FAQs.

- **Training Sessions -**
    - The Customer Training team conducts live training sessions for different user groups,facilitated by the external firm or internal trainers, ensuring that users can effectively navigate and use the system.

- **Post-Training Support -**
    - Provide ongoing support through helpdesks, support tickets, and dedicated support staff,addressing user questions and issues promptly.

Project Success Criteria

1. **Budget and Timely Completion -** The C3S system must be fully developed, tested, and deployed within a strict 2-month timelineand within the allocated Budget.

2. **System Development –**
   - Deliver a fully functional supplier management system with comprehensive features including registration, subscription management, communication, order management, and inventory tools, demand management tools and reporting tools.

   - Seamless integration with company systems and third-party services, ensuring compatibilityand smooth operation without significant issues.

3. **User Interface Design –** Create a user-friendly interface accessible via desktop and tablet, ensuring ease of use and highuser satisfaction.

4. **User Adoption and Satisfaction -** A user satisfaction rate of 90% is based on benchmarks from customer satisfaction studies in the IT industry (Mariano, 2020), where systems with high usability and functionality, we aim toachieve at least 85%.

5. **System Performance and Reliability -** An uptime of 99% is considered a standard for high-availability systems, as noted in (Haryanti, 2019), our plan is to maintain a minimum uptime of 98%, ensuring reliable service with minimal downtime.

6. **Reduction in Stockouts and Order Inaccuracies -** Our target is to achieve a 20% reduction in stockouts within the first three months post- implementation and 95% accuracy rate in order fulfillment, which is a practical initial goalconsidering the system's focus on improving order tracking and communication.

7. **Financial Impact –**
   - Achieving a 15% ROI within the first-year post-launch. This target is based on conservative estimates of subscription uptake and additional income streams, accounting for potential initialcosts and unforeseen expenses.

- Achieve the targeted least subscription number revenue and paid and sponsored announcements.

8. **Data Security and Compliance -** Fully comply with relevant data security standards and regulations, including achieving ISO 2700, (CALDER, 2008) which is a benchmark, compliance where applicable. The target is tomaintain zero data breaches, ensuring user trust and system integrity.

Project Deliverables

- **Company Registration Module**

Companies need to provide essential details, compliance information, and payment details for subscription.

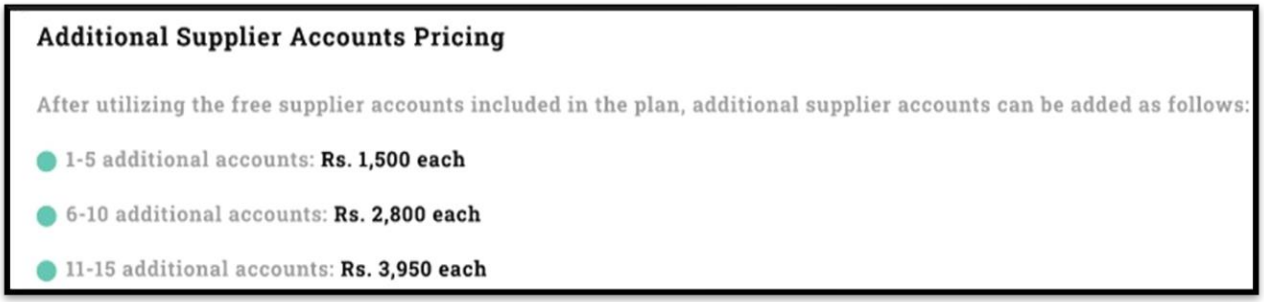

Figure 1: Additional supplier registration:

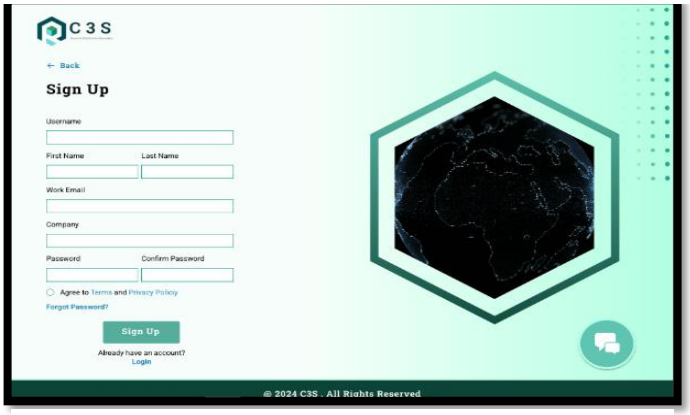

Figure 2: Sign up interface

Companies and potential suppliers

Potential suppliers and businesses are welcomed by an easy-to-use registration interface when they visit the C3S portal. Businesses are asked to input their contact information, industry category, and firm name. On the opposite hand, potential suppliers offer information about their goods, services, and credentials. Both parties will be able to immediately establish their identities on the platform and start taking advantage of its tremendous features thanks to this simplified registration process.

Current Suppliers of Companies:

A company's current suppliers are easily incorporated into the system. Businesses can choose to register as many as nine suppliers for free. This promotes companies to onboard their existing supply chain partners, improving communication and teamwork via the site.

Extra Accounts for Suppliers:

If a company must register a maximum of nine suppliers, they can purchase additional slots in the following ways:

1 to 5 more accounts: **Rs 1,500** each
6 to 10 more accounts: **Rs.2,800**each
11–15 more accounts: **Rs. 3,950** each

- ## Subscription Packages

Suppliers

Standard	Pro
Package 01 – Per month subscription	Package 01 – Per month subscription
Package 02 – Per Yearly Subscription	Package 02 – Per Yearly Subscription

Table 1: Subscription packages of suppliers

Supplier Registration and Subscription: Enables external suppliers to register for free but accessadditional features via subscription such as to interact with companies

C3S Standard Subscription (Suppliers)

View from the Suppliers:

The C3S Standard platform provides a simple interface for suppliers to handle orders and get in touch with businesses. They get access to order histories, current and prior orders, order status updates, and alerts for when the company's inventory drops below the reorder threshold. Included are basic performance measurements and a messaging system for interaction. Simple reports on fulfillment of orders and performance are included in the user interface, along with a straightforward dashboard overview.

C3S Pro Subscription (Suppliers)

View from the Suppliers:

Access to advanced order management tools, such as comprehensive order lists and tracking information in status updates, is available to suppliers who use the C3S Pro system. Inventory management is made easier with automatic restock requests and real-time inventory alerts. A thorough dashboard with performance indicators is provided, along with facilities for benchmarking versus industry norms. Improved cooperation with businesses is made possible by sophisticated communication tools like group texting and video conferencing. Comprehensive information on the fulfillment of orders, performance indicators, and customer comments are included in the user interface, along with an advanced, customized dashboard overview.

Companies

Standard	Pro
Package 01 – Per month subscription	Package 01 – Per month subscription
Package 02 – Per Yearly Subscription	Package 02 – Per Yearly Subscription

Table 2: Company Subscription Packages

C3S Standard Subscription (Companies)

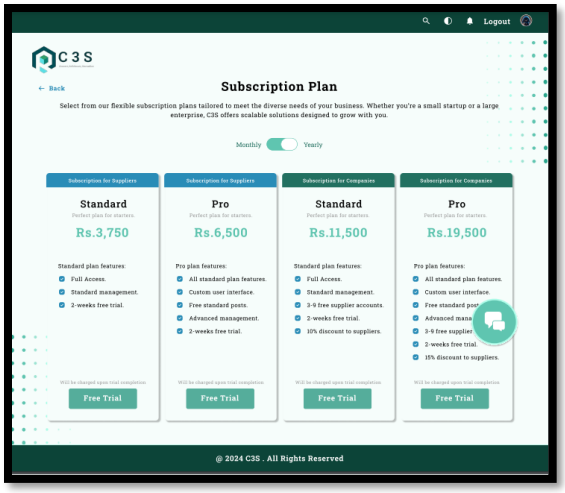

View from the Company:

The C3S Standard platform gives businesses the tools they need to effectively manage their suppliers, orders, and inventories. Real-time updates on the present situation with visible indications and simple reorder point warnings are features of inventory management. Inventory control is made easy by item classification and seamless connection with warehouse operations. A basic directory containing contact information, status of orders updates, and performance data like lead time and on-time delivery rate are provided by supplier management. Order history, pending orders, and a tracking map are all included in order management. Basic alerts are used to notify users of low inventory plus order updates. The user interface consists of a straightforward dashboard overview, simple reports, and an integrated messaging system for interaction.

C3S Pro Subscription (Companies)

View from the Company:

The enhanced capabilities of the C3S Pro platform improve the experience of managing suppliers and inventories. Automated reorder point modifications, comprehensive inventory visualizations, and data-driven inventory forecasts are advantageous for businesses. Comprehensive performance dashboards, tools for comparing suppliers, and sophisticated reporting improve supplier management. Order management includes route optimizations, order optimization recommendations, and real-time tracking. Engaging with suppliers in real time across many channels is made possible via an integrated communication gateway. Improved security features including multi-factor authentication including compliance management tools are offered, along with enhanced notifications and a user-friendly interface with comprehensive reports and analytics.

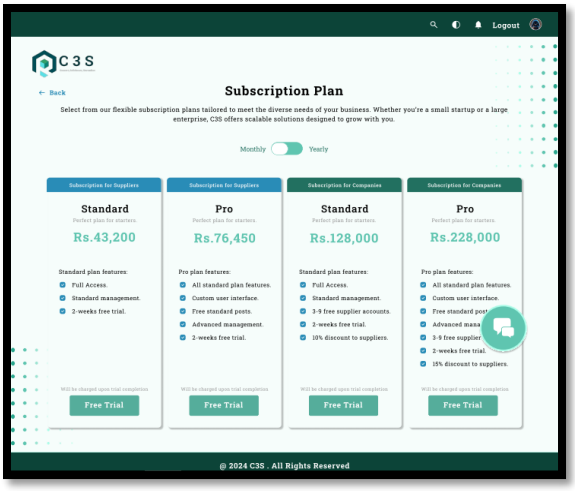

Figure 3:Subscription Packages (Monthly) *Figure 4: Subscription Packages (Yearly)*

- **Communication Platform**

Allows companies to post supplier needs and announcements, withthe option for sponsored posts to appear at the top.

C3S Standard:

The C3S Standard system's communication platform is made to make simple but efficient communication between businesses and their suppliers possible. Simple text-based communication is made possible by its integrated messaging system. The main method of notification is email alerts, which make sure consumers are informed about important updates like low levels of stock, order status, and supplier communications. This simple communication configuration makes sure that crucial information is disseminated quickly, facilitating efficient operational collaboration.

C3S Pro:

A single, integrated communication gateway that facilitates real-time interaction across numerous channels elevates communication to a new level in the C3S Pro system. The Pro edition features file sharing and group messaging alongside the standard message system, making interactions more effective and collaborative. To ensure effective and transparent communication, businesses and suppliers can also use video conferencing for in-person meetings. Order delays, inventory thresholds, supplier performance difficulties, and other specific events may all be customized with alerts that can be sent out by the platform using a variety of notification methods, such as SMS and in-app alerts. Better coordination and decision-making result from this extensive communication setup, which makes sure that all parties involved are always informed and linked.

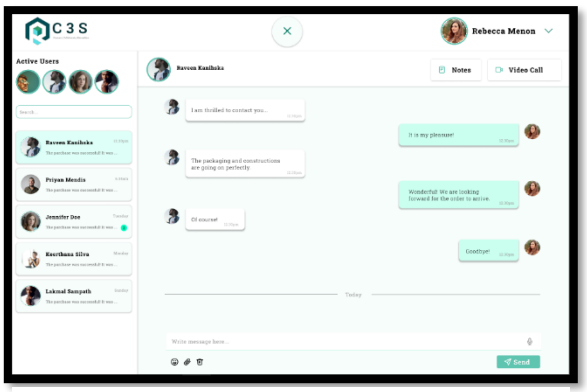

Figure 6: Collaboration Hub

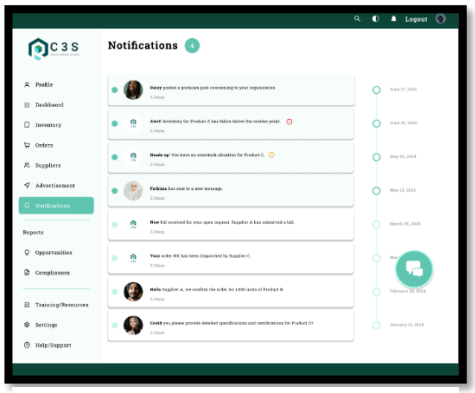

Figure 5: Notification Panel

- **Order Management System:**

Facilitates the entire order process from placement to delivery, including necessary documentation and communication tracking.

01. Supplier View – C3S Standard

• **Order list**: A simple data-filled list of both previous and present orders.

• **Order progress updates**: The ability to change the status of an order, such as shipped, delivered, or in transit.

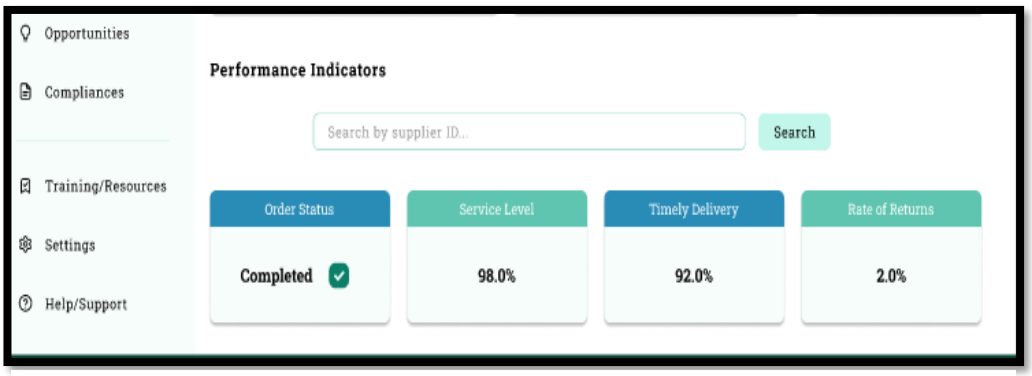

Figure 7: Performance Indicators

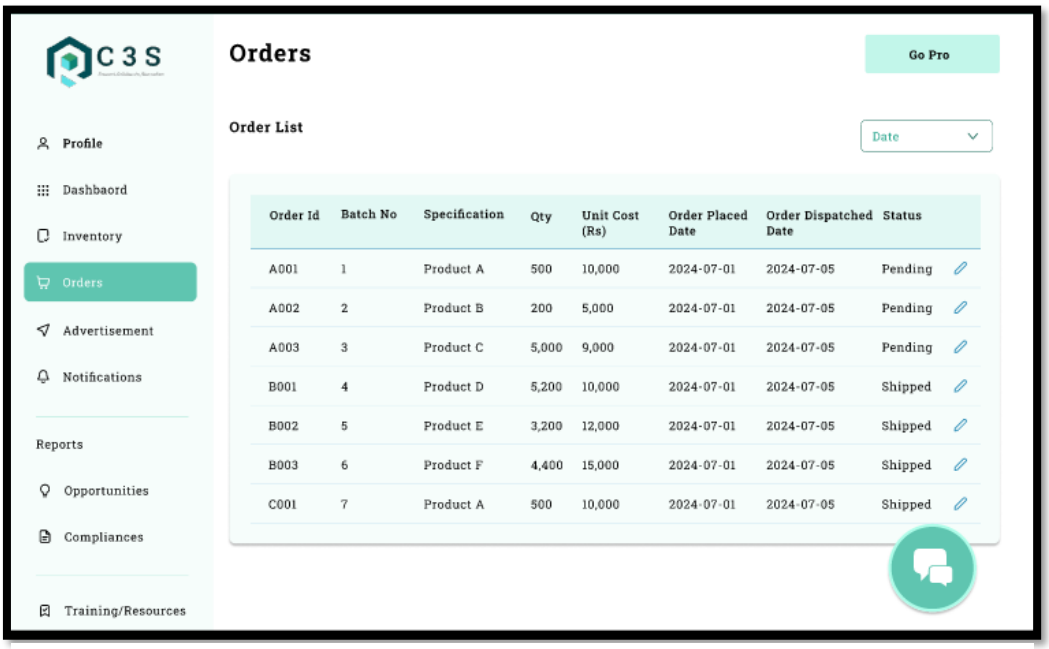

Figure 8: Order List

02. Supplier View – C3S Pro

• **Comprehensive order list:** Improved order information featuring search and filter features.

• **Enhanced order status reports:** Tracking information is included in more thorough status reports.

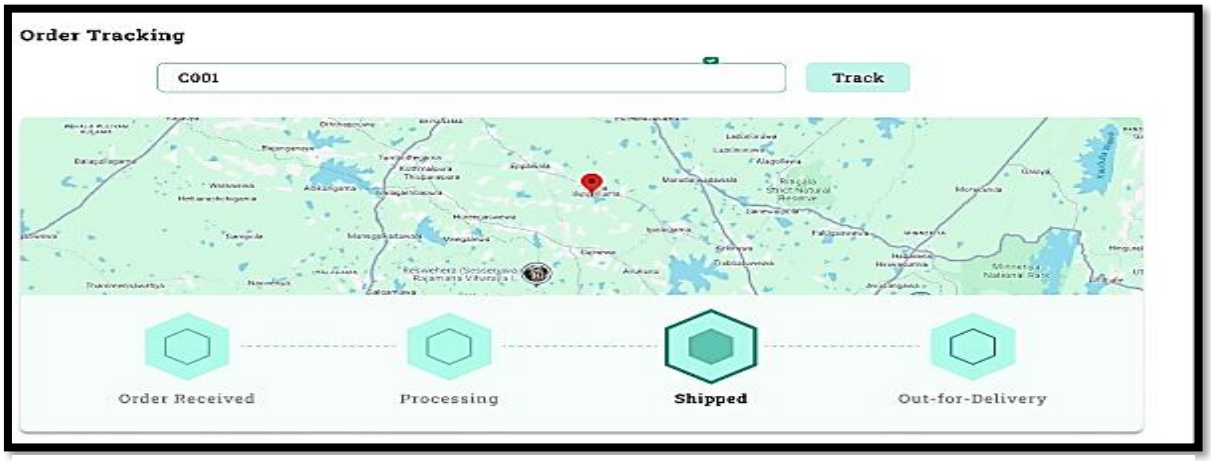

Figure 9: Order Tracking

Performance Report

Supplier	Quality Score	Delivery Times (Days)	Reliability (%)	Industry Benchmark	Average Performance	Performance Rating
Supplier 1	4.5	3.0	98	4.2 / 4.0 / 95	4.3 / 3.7 / 96	Excellent
Supplier 2	4.0	5.0	95	4.2 / 4.0 / 95	4.3 / 3.7 / 96	Good
Supplier 3	4.8	2.0	99	4.2 / 4.0 / 95	4.3 / 3.7 / 96	Excellent
Supplier 4	3.9	3.5	93	4.2 / 4.0 / 95	4.3 / 3.7 / 96	Average

Figure 13: Order History

04. Company View – C3S Pro

• **Order tracking**: Follow orders in real time and receive thorough status reports.
• **Order optimization**: Reorder window maximization and order batching recommendations.
• **Map view**: Provides supplier locations, order monitoring, and optimized routes (delivery routes free of traffic).

Figure 14: Order Tracking advanced

Figure 15: Order Optimization

- **Inventory and Demand Management:**

  Provides tools for automated inventory monitoring, demand forecasting, and replenishment needs analysis for Premium users.

  01. Suppliers view – C3S Standard

  • **Inventory Alerts**: Get informed when the company's stock levels drop below the return on invested capital.
  • **Restock Requests**: Examine the company's restock requests.

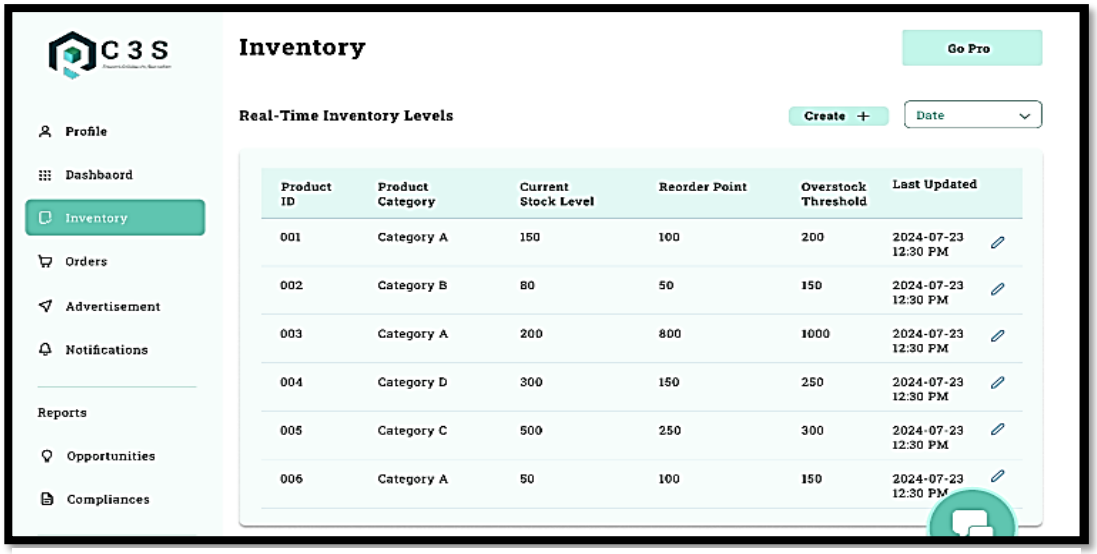

Figure 16: Real - time inventory levels

Figure 17: Inventory and demand pattern

02. Suppliers view – C3S Pro

• **Real-time alerts for levels of inventory and reorder points**: Instantaneous notifications.
• **Automatic Restock Requests**: These requests are created automatically using the inventory data of the business.

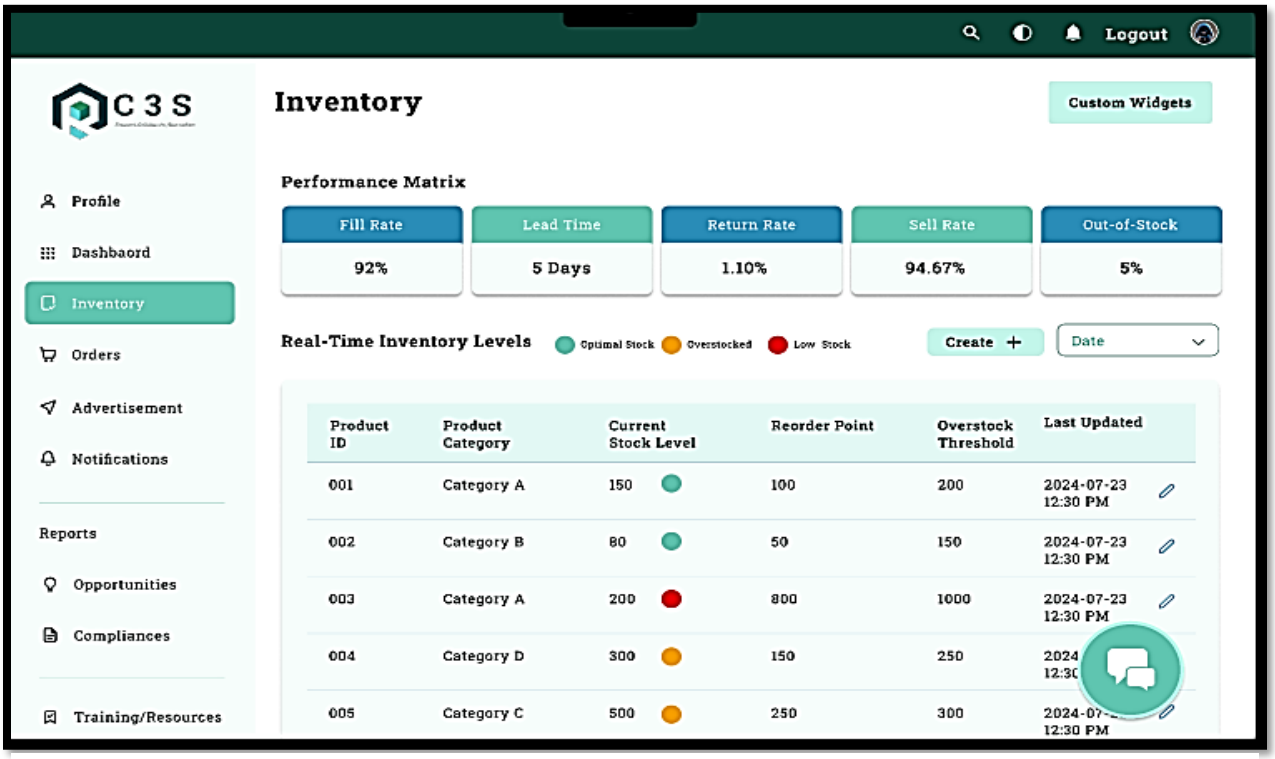

Figure 19: Inventory levels with light indicators

Figure 18: Inventory tracking

03. Companies view – C3S Standard

• **Current Stock Levels**: Use visual cues, such as color-coded stock status, to show current inventory levels in real time.
• **Basic Reordering Point Alerts**: Send out a notification when stock levels drop below the ROP.
• **Item Categorization**: Sorting items into categories based on department, type, etc.
• **The Warehouse Management System**: Allows for real-time inventory updates through seamless connection with warehouse operations.

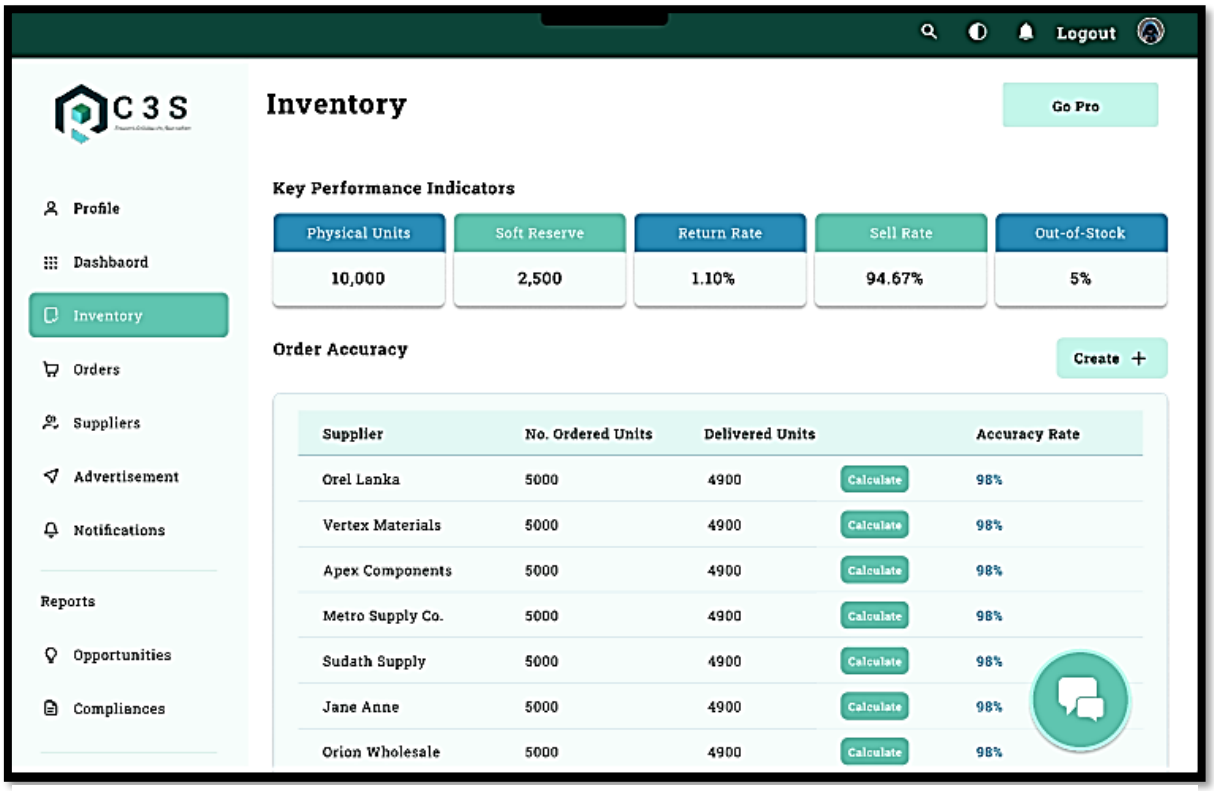

Figure 20: KPI of inventory

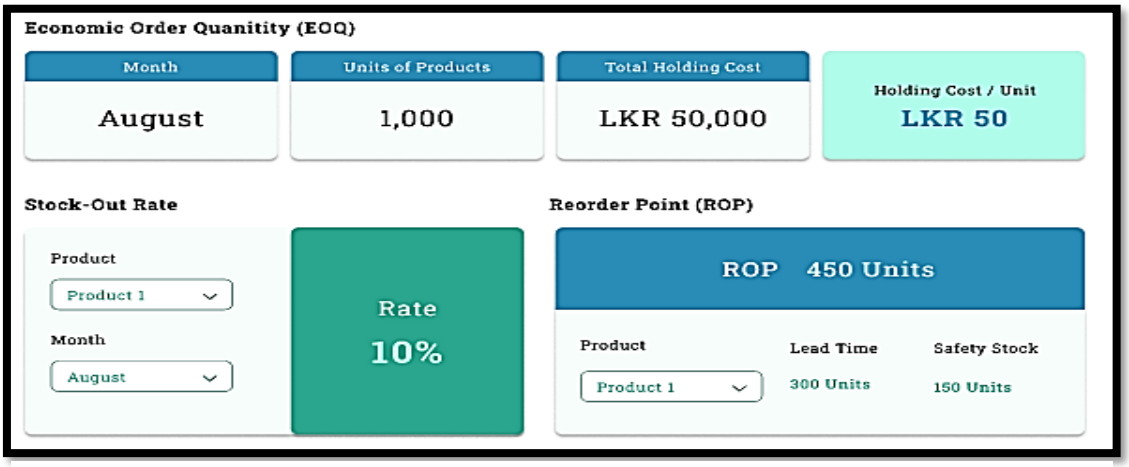

Figure 21: EOQ ROP and stockout

Figure 22: Stats

04. Company view – C3S Pro

• **Comprehensive Inventory Levels**: Better filters and visualizations for inventory levels.
• **Automated Reordering Point Adjustments**: ROP is adjusted by clever algorithms in response to patterns.
• **Inventory forecasting**: Use trends and historical data to project future inventory requirements.
• **Tracking Stock Movement**: Extensive monitoring of stock movement in the warehouse.

Figure 23: Inventory Forecast

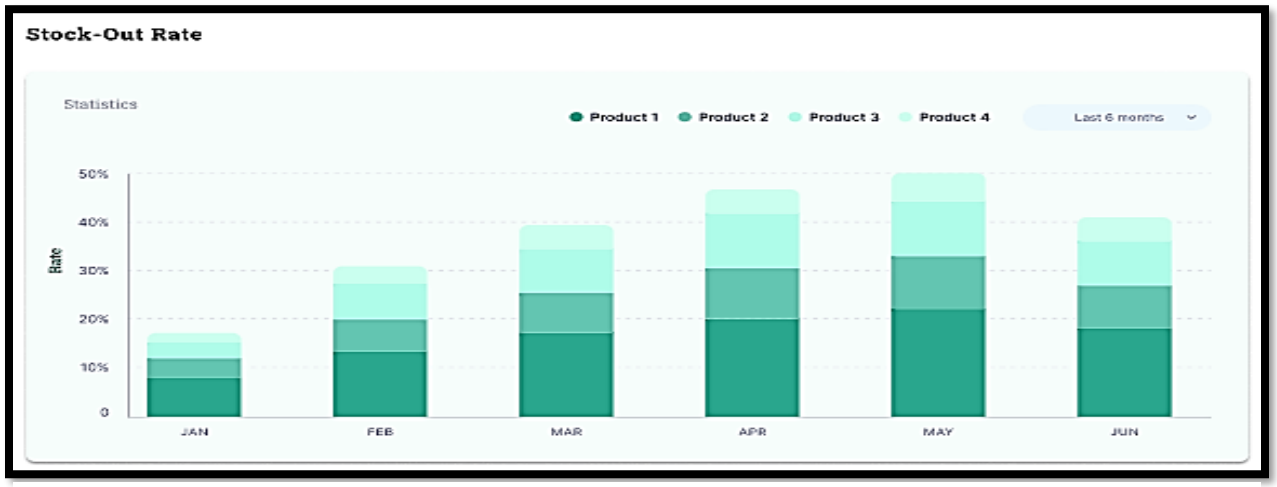

Figure 24: Stockout rate

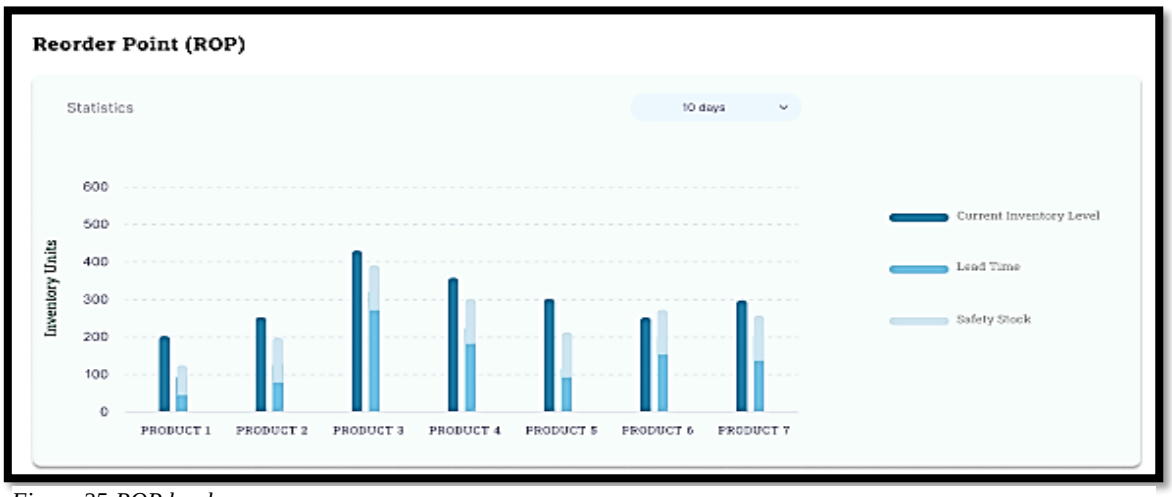

Figure 25:ROP levels

- **Supplier Performance Review:**

Implements a KPI-based system for companies to review supplier performance post-order completion.

01. Supplier's performance – Company view – C3S Standard

- **Supplier Directory**: a basic list of vendors together with their information.
- **Order State Updates**: Access supplier-updated order statuses.
- **Supplier Performance**: Metrics such as the percentage of on-time deliveries.

Service Level: The proportion of orders that arrive on schedule.
Lead Time: The typical time needed to complete an order.
Return Rate: The percentage of returned merchandise.

Timely Delivery: The quantity of orders that are fulfilled in the allotted time.
Statistical Analysis: KPI visualization using simple graphs and charts.

Figure 26: KPI of Suppliers

Figure 27: Supplier comparison

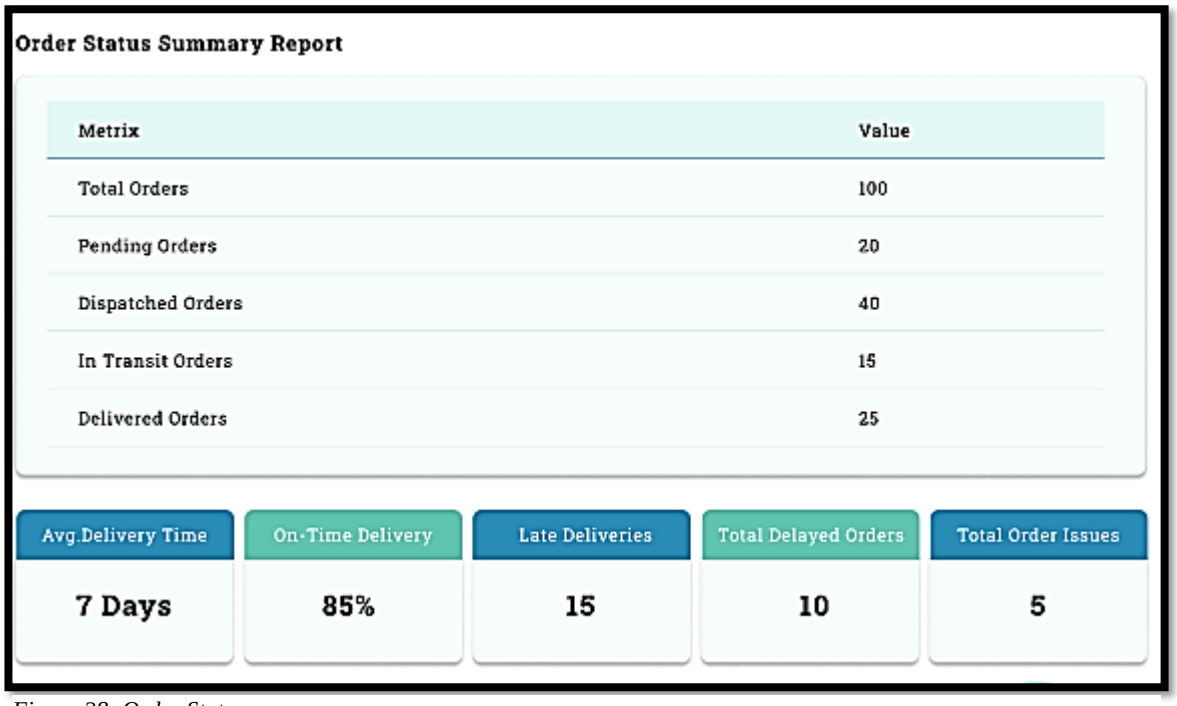

Figure 28: Order Status

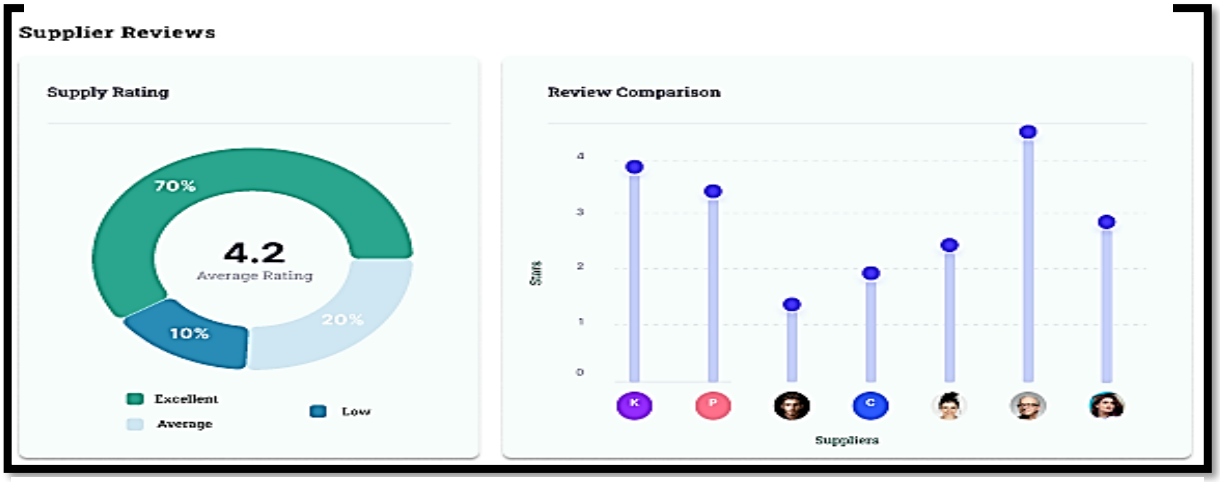

Figure 29: Supplier ratings

02. Supplier performance – Companies View – C3S Pro

• **Suppliers Performance Dashboard**: Contains extensive performance data on dependability, delivery time, and quality ratings.
• **Supplier Comparison**: Utilize a variety of measures to compare several vendors.
• **Supplier Reviews and Ratings**: Evaluate and rank providers according to their output.

• **Advanced Reporting**: Comprehensive reports that include performance benchmarks and trend analysis.

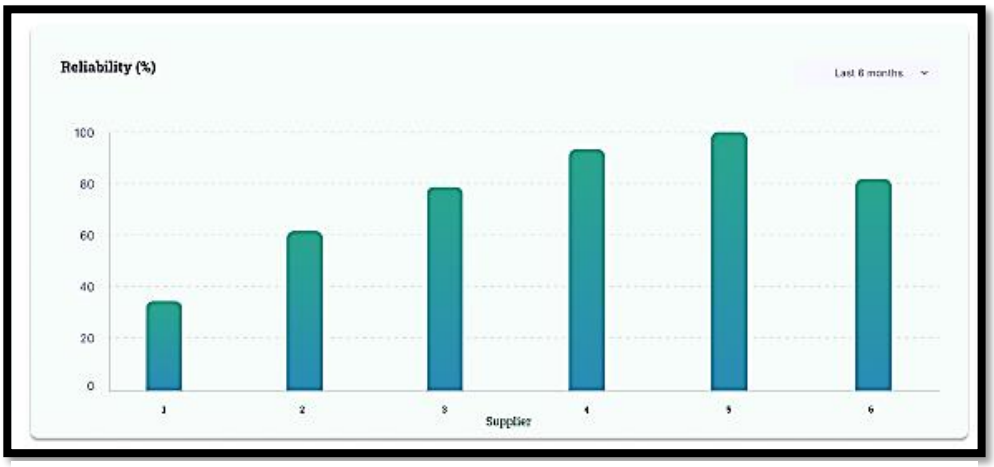

Figure 30: Reliability

Performance Benchmarks

Supplier	Quality Score	Delivery Times (Days)	Reliability (%)	Industry Benchmark	Average Performance	Performance Rating
Supplier 1	4.5	3.0	98	4.2 / 4.0 / 95	4.3 / 3.7 / 96	Excellent
Supplier 2	4.0	5.0	95	4.2 / 4.0 / 95	4.3 / 3.7 / 96	Good
Supplier 3	4.8	2.0	99	4.2 / 4.0 / 95	4.3 / 3.7 / 96	Excellent
Supplier 4	3.9	3.5	93	4.2 / 4.0 / 95	4.3 / 3.7 / 96	Average
Supplier 5	4.2	4.5	95	4.2 / 4.0 / 95	4.3 / 3.7 / 96	Excellent
Supplier 6	4.1	3.8	81	4.2 / 4.0 / 95	4.3 / 3.7 / 96	Excellent
Supplier 7	3.0	4.1	75	4.2 / 4.0 / 95	4.3 / 3.7 / 96	Low

Figure 31: Performance Benchmarking

- **Reporting and Analytics:**

Generates detailed reports on supplier performance, inventory levels, and demand forecasts.

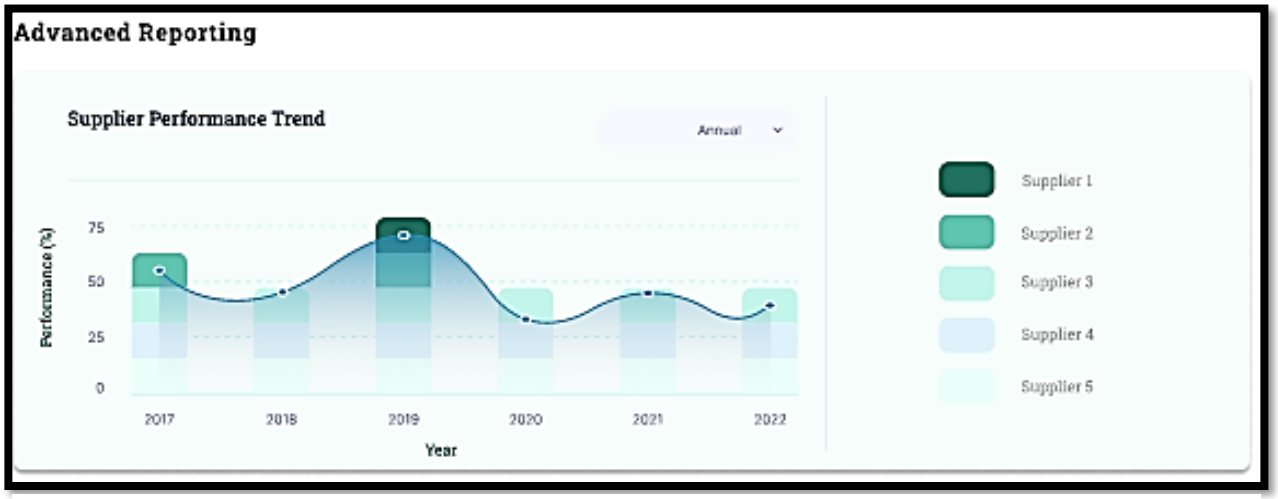

Figure 32: Advanced reports

- **Paid Post:**

Purpose of Premium and Urgent Posts –

In the ever-changing world of procurement management, businesses frequently encounter circumstances that call for quick thinking and decisive action. This need is met by the C3S portal's provision of urgent as well as premium posts, which give businesses a forum to emphasize theiressential needs and guarantee they hear back from suppliers right away.

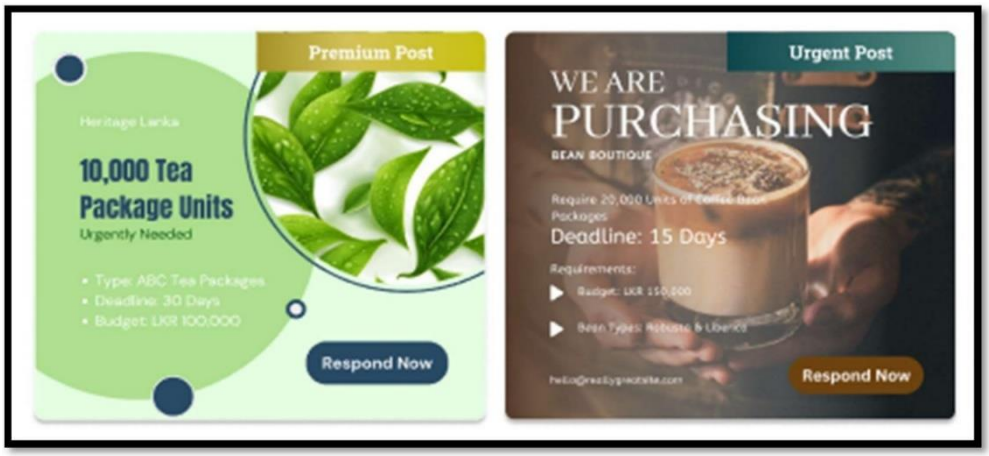

Figure 33: Paid Posts

Urgent Posts

- Posts marked as "urgent" are intended for situations where businesses have a tight deadline and need to acquire goods or services quickly. Suppliers will notice these ads right away because they are ranked highly on the portal and show up at the very top of the listings. In situations like unanticipated spikes in demand, supply chain interruptions, or emergencies needing rapid procurement, businesses will use urgent posts. The C3S portal guarantees business continuity and reduces the risk of delays for organizations by providing this capability.

Premium Posts

- Beyond standard posts, premium posts provide businesses with increased visibility and reach. Due to their prominent placement within the site, these posts are seen by a larger number of suppliers. Businesses use premium postings to draw in top-notch vendors, get aggressive quotes, and make sure their requirements are satisfied with the greatest options. This function is especially helpful when procuring specialist goods and services, undertaking large-scale projects, or engaging in strategic buying. In addition, premium posts offer other advantages including longer visibility duration, comprehensive analytics, as well as priority support, which makes them a desirable choice for important and expensive procurements.

Visibility Duration and Management

Urgent Posts: Depending on the level of urgency and type of the request, these posts are normally displayed for a shorter period—between 10 and 15 days. The brief visibility time guarantees promptaction from suppliers, enabling prompt buying decisions.

Premium posts: Typically, premium postings are visible for a term of 15 days or one month. This longer time frame enables businesses to get more responses and choose the best supplier for theirneeds.

Project Outcomes

- Improved communication and collaboration between companies and suppliers.
- Enhanced inventory management and reduction of stockouts.
- Streamlined supplier performance tracking and order management.
- Increased operational efficiency and productivity.
- Better supplier selection and evaluation processes.
- Higher profit margins through efficient supply chain management.

Project Team

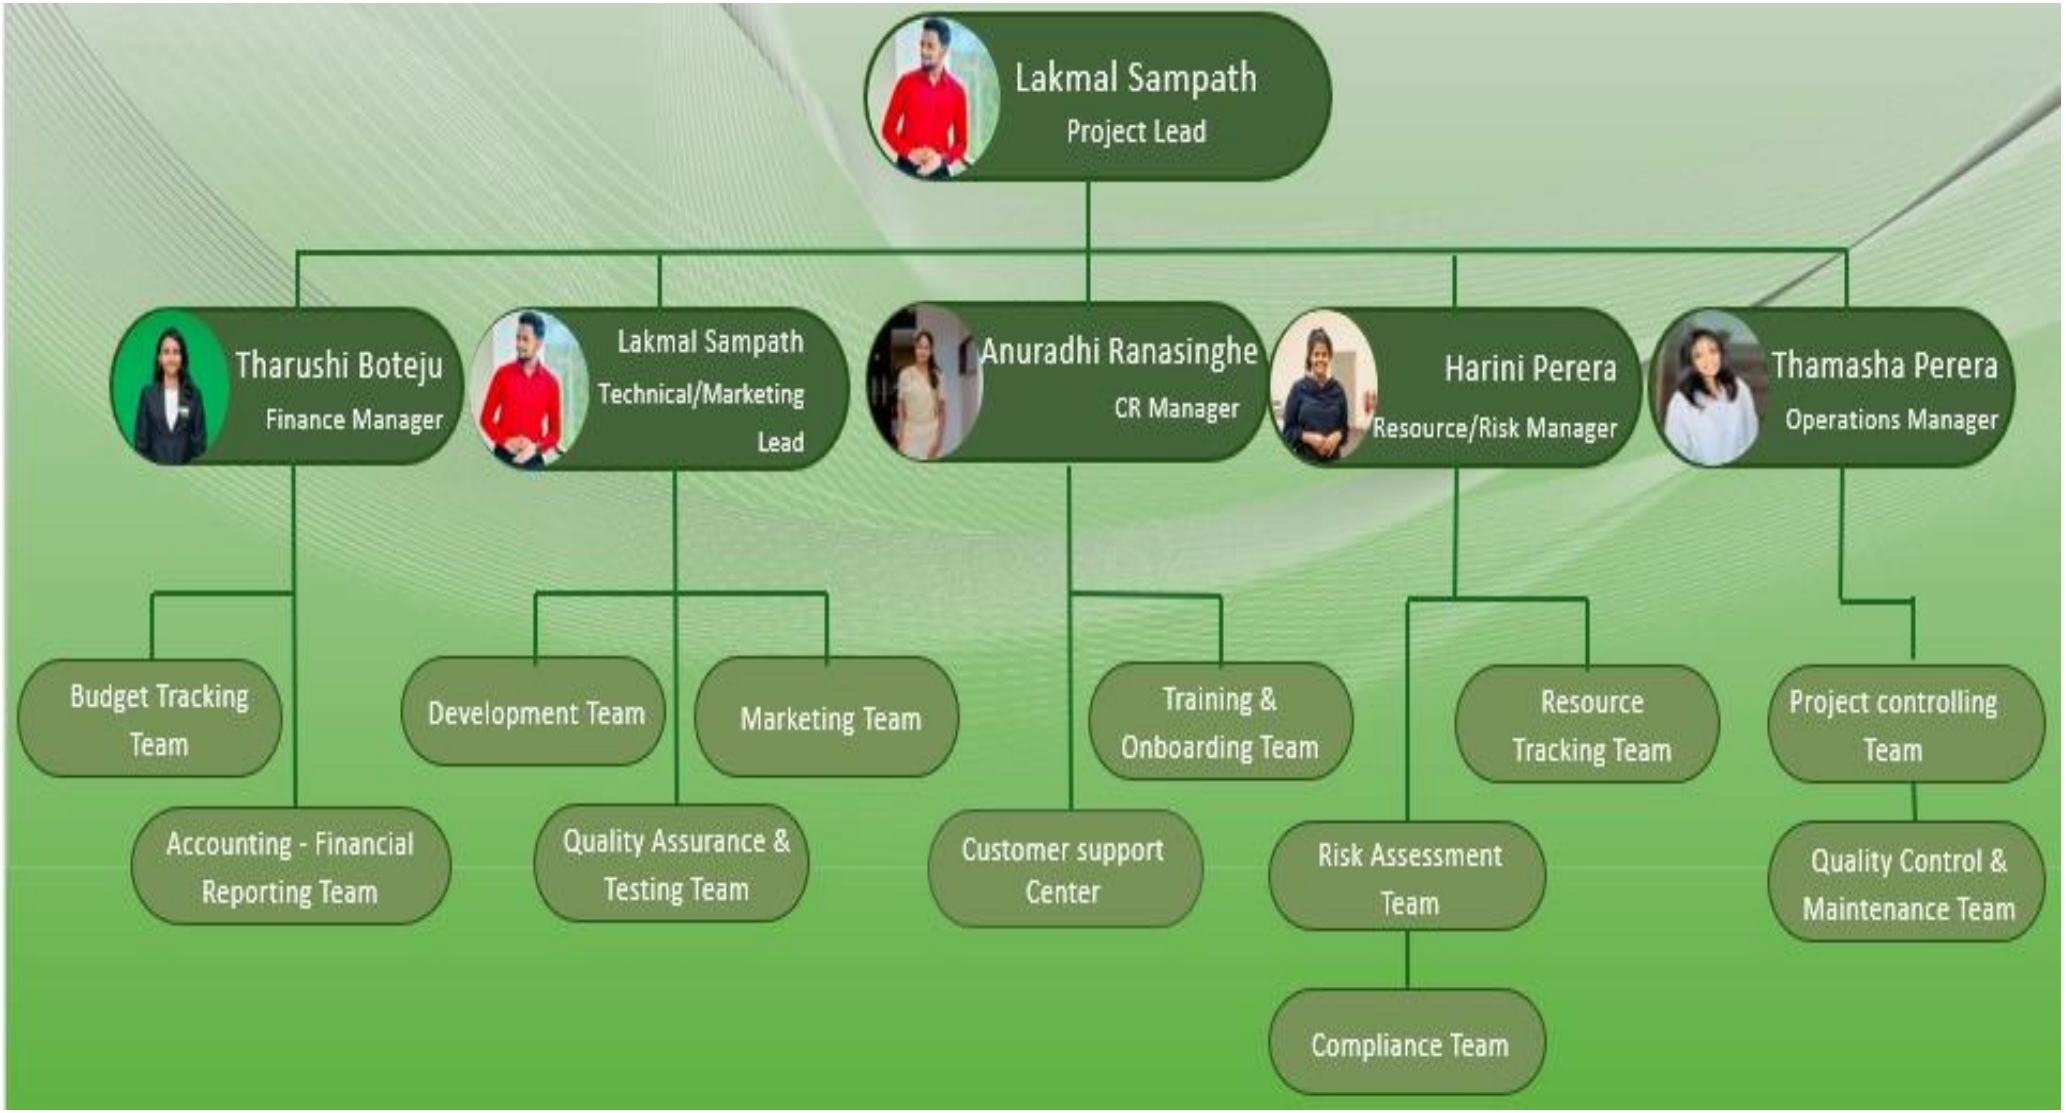

Figure 34: Project Team

Responsibilities

Project Team Lead

- Plan the Project: Outline what needs to be done, set deadlines, and map out the project's goals.
- Lead the Team: Motivate and guide your team, making sure everyone knows their tasks.
- Communicate with Stakeholders: Keep everyone informed about the project's progress andmanage their expectations.
- Manage Risks: Spot potential problems early and figure out how to handle them.
- Allocate Resources: Make sure your team has everything they need to succeed.
- Ensure Quality: Check that the project deliverables meet the required standards.
- Handle the Budget: Keep track of expenses to ensure the project stays within budget.
- Document Everything: Keep detailed records of the project's progress.

Finance Manager

- Plan Finances: Create financial strategies and plans to help the company achieve its goals.
- Manage Budgets: Prepare and oversee budgets to ensure resources are used efficiently.
- Generate Reports: Produce financial reports like balance sheets and income statements.
- Control Costs: Monitor and control spending to ensure the company's financial health.
- Ensure Compliance: Make sure the company follows financial regulations.
- Manage Investments: Evaluate and manage investment opportunities.
- Advise Management: Provide financial insights and recommendations to top management.

Technical/ Market Lead

- Oversee the development of the system by the external firm.
- Oversee the marketing operations done outsources.

- Develop Strategies: Create marketing plans that align with business goals.
- Analyze Performance: Measure and analyze the success of marketing efforts.

CR Manager

- Lead the Team: Guide and support the customer relations team.
- Ensure Good Service: Make sure customers receive prompt and courteous service.
- Resolve Issues: Oversee the resolution of customer complaints and issues.
- Collect Feedback: Gather and analyze customer feedback to improve services.
- Train the Team: Develop the team's skills and performance.
- Monitor Performance: Track customer service metrics to measure success.
- Engage Customers: Develop strategies to build long-term customer relationships.

Resource/ Risk Manager

- Assess Risks: Identify and evaluate risks that could impact the organization.
- Develop Mitigation Strategies: Create plans to address and reduce risks.
- Allocate Resources: Distribute resources like personnel and finances to various projects anddepartments.
- Optimize Resources: Ensure resources are used efficiently.
- Plan for Contingencies: Develop backup plans for potential resource shortages.
- Report on Risks and Resources: Keep management informed about risks and re-source use.
- Ensure Compliance: Make sure risk management practices follow regulations.

Operations Manager

- Plan Operations: Develop and implement operational plans and strategies.
- Improve Processes: Find ways to make processes more efficient.
- Ensure Quality: Make sure operations meet quality standards.
- Monitor Performance: Keep track of how well operations are running and make improvementsas needed.
- Report on Operations: Provide regular updates on operational performance to management

Project Management Plans

Stakeholder Management plan

Stakeholder	Their interest or requirement from the project	What our project needs from them	Perceived attitudes and/or risks	Actions to manage and engage stakeholders.
Anjella Jayathilake – Director of marketing and Administration of Heritage Lanka pvt ltd	Maintaining market competitiveness and building brand reputation by implementing data-driven insights, real-time inventory tracking, & enhanced supplier communication to ensure dependable and efficient supply chain operations.	Support in communicating the benefits of the portal to stakeholders, active participation and input on marketing & administrative functions, and cooperation in coordinating the portal's features with business objectives and legal requirements.	Appreciative of innovations that boost productivity and competitiveness, but cautious of any implementation-related cramps, data security, and the portal's capacity to be tailored to the unique requirements of the business.	Regular Updates: To keep stakeholders informed, provide regular updates & progress reports on your project. Feedback Sessions: To get opinions and fix issues, schedule frequent feedback sessions. Training and Support: To guarantee that stakeholders feel at ease utilizing the new system, provide thorough training as well as continuous support.
Senior Management	Improved supplier relationships, cost savings, increased operational efficiency, and	Resource allocation, support for decision-making, and strategic direction.	Supportive if in line with strategic objectives, but cautious of any interruptions and	Report on strategic alignment, maintain consistent contact, and emphasize ROI advantages.

	strategic alignment with business objectives.		return on investment.	
Project Team	The accomplishment of project objectives, milestones, and successful project implementation.	Commitment, teamwork, and timely task completion.	Extremely driven but possibly limited in time or resources.	Clear work assignments, frequent team meetings, and robust project management assistance.
Suppliers	Order processing is done quickly and clearly, payments made on schedule.	Ongoing supply, prompt updates, and acknowledgment of quality requirements.	Supportive if it helps their business, but critical about system functionality and adaptability to change.	Assure open communication, give training, and design user-friendly interfaces.
Government	Adherence to laws and support for the growth of the economy.	Guidelines for compliance and regulatory support.	Encouraging compliance but strict with rules.	Assure adherence to regulations, keep lines of communication open, and deliver required paperwork.
Regulatory Bodies	Appreciation for industry norms and guidelines	Unambiguous regulatory requirements and clearance.	Cautious about non-adherence and intent on compliance.	Conduct routine compliance audits, keep lines of communication open, and guarantee openness.

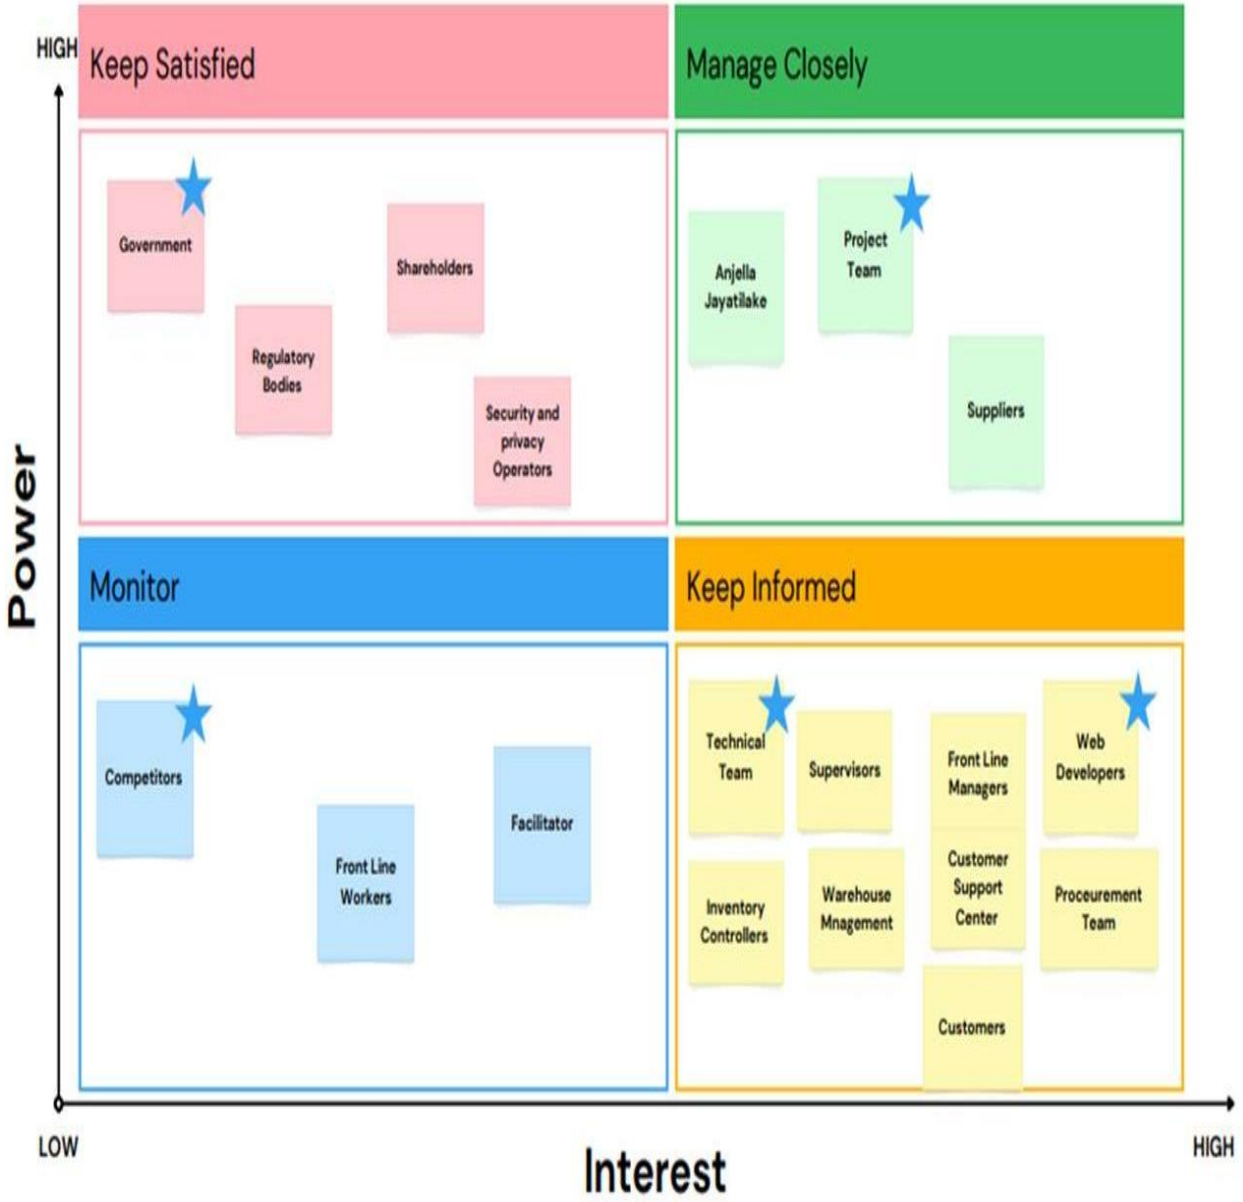

Security and Privacy Operators	Ensuring privacy and security of data for all parties involved	The application of strong security measures and adherence to privacy guidelines.	Robust security measures are encouraged, but data breaches should be avoided.	Conduct routine audits, train people on security, and implement and upgrade security measures on a regular basis.
Shareholders	Maximizing return on investment and guaranteeing sustained business expansion.	Both monetary assistance and strategic guidance.	If it offers a strong return on investment, support it but be careful of taking financial risks.	Keep everything transparent, give frequent financial updates, and emphasize possible returns on investment.
Supervisors	Effective team management and seamless operating processes.	Assistance in managing team modifications and system implementation.	Supportive if it increases productivity, but alert about implementation difficulties.	Throughout the transition, give assistance, guarantee good communication, and conduct training.
Front line managers	Efficient supervision of daily activities and group output.	Assistance with day-to-day system use and performance feedback.	Helpful if it makes daily work easier but be aware of how usable the system is.	Make sure user interfaces are friendly, offer practical training, and get input on a regular basis.

Technical Team	Effective integration and upkeep of the system.	System development and technical assistance.	Extremely encouraging but worried about the distribution of resources and technological difficulties.	Clearly state the technical needs, maintain consistent communication, and provide the required resources.
Inventory Controllers	Precise inventory tracking and effective stock control.	Active system uses and comments on features related to inventories.	Supportive if it improves accuracy but concerned about the complexity of its implementation.	Assure accurate system functionality, give thorough training, and get feedback on a regular basis.
Warehouse Management	Effective storage facility operations and precise inventory control.	Assistance with putting warehouse management elements into practice and system performance feedback.	Supportive insofar as it enhances operations, but mindful about integration difficulties.	Give practical instruction, guarantee a smooth integration, and provide ongoing assistance.
Customers	Accurate order fulfillment and prompt product delivery.	Order tracking and service quality feedback via the portal.	Supportive if it improves the caliber of services but concerned about data privacy.	Make sure that interfaces are easy to use, that communication is clear, and that robust data privacy safeguards are upheld.

Customer Support Center	Effective management of client concerns and inquiries.	Feedback on consumer contact features and active system usage.	Apprehensive about the usability of the system but supportive if it helps them with their tasks.	Assure user-friendly interfaces, offer training, and get input on a frequent basis.
Procurement Team	Effective supplier management and procurement procedures.	Utilizing procurement features actively and providing system performance comments.	Be receptive to improvements in procurement, but suspicious of system integration.	Give thorough instruction, guarantee a smooth integration, and provide ongoing assistance.
Web Developers	The system was developed and implemented successfully.	Technical know-how and continuous assistance with development.	Extremely encouraging but worried about the distribution of resources and technological difficulties.	Clearly state the technical needs, maintain consistent communication, and provide the required resources.
Competitors	Maintaining competitiveness in the market through benchmarking.	No hands-on participation, although competitive insights are monitored.	Competitive and wary, worried about jeopardizing market share.	Keep an eye on market developments, make sure innovation never stops, and hold onto your advantages.

Front line workers	A manageable and effective workload with unambiguous directions.	Feedback on operational processes and proactive system utilization.	Supportive if it makes their jobs easier, but hesitant of taking on more work.	Make sure user interfaces are friendly, offer practical training, and get input on a regular basis.
Facilitator	Satisfactory project completion and a hands-on educational opportunity for students.	Project evaluation, advice, and comments.	Supportive of the value of education yet apprehensive about the viability of the company.	Continually seek feedback, deliver updates on a regular basis, and make sure that the goals of instruction are met.

Stakeholder Assessment Map

	Stakeholders	Point Person
Keep Satisfied	• Government • Regulatory Bodies • Shareholders • Security and Privacy Operators	Government
Manage Closely	• Anjella Jayatilake • Project Team • Suppliers	Anjella Jayatillake
Monitor	• Competitors • Front Line Workers • Facilitator	Competitors
Keep Informed	• Technical Team • Supervisors • Inventory Controllers • Warehouse management • Front line Managers • Customer Support Center • Web Developers • Proceurement Team • Customers	Technical Team & Web Developers

Figure 35: Stakeholder Mapping

Risks Identification and Mitigation Plan

Risk is inherent in any project. Thus, it is essential to develop a risk management process to identify and correct the issues before they become a problem. The table below shows the risk assessment of the project that might affect the success of the project. It consists of the Risk and its category, likelihood and impact and the risk mitigation strategy.

Risk	Risk Category	Likelihood	Impact	Score HIGH = 3 MEDIUM = 2 LOW=1	Mitigation Strategy
High cost of development and maintenance of C3S	Financial Risk	2	3	6	Employing an open-source solution with average cost
Unavailability of competent app developers	People Risk	2	3	6	Providing proper training to upskill the competencies of existing staff
Delays in app development (exceeds time and budget)	Operational Risk	2	3	6	Having strict, realistic timelines and regularly monitoring the progress, while having contingencies for delays
Inaccurate notifications and alerts	Operational Risk	2	3	6	Thorough testing and validation of notifications and alert system before launch
Staff reluctant to embrace C3S	People Risk	2	2	4	Highlighting the benefits and efficiencies gained through C3S, during the training and supports sessions that being conducted to the staff to create a sense of ownership and excitement about the system.
Technical Issues during implementation	Operational Risk	2	2	4	Conducting extensive testing in controlled environments before deployment
Supplier non-compliance to the system	Strategic Risk	1	2	2	Implementing contractual agreements that would include compliance requirements
User interface is complicated	Strategic Risk	1	2	2	Having user feedback session to simplify the interface if required

Ineffective supplier performance tracking	Strategic Risk	1	2	2	Integrate data analytic tools, clear metrics and KPIs to provide accurate performance insights
Supplier reliability issues	Strategic risk	2	2	4	Having suppliers to fill their information including the feedback of their previous customers
Inefficient Budget allocation	Financial risk	2	3	6	Conducting detailed financial planning while implementing budget tracking tools to monitor expenses
Negative impact on Supplier relationship	Strategic risk	1	2	2	Maintaining open and transparent communication and addressing their concerns promptly to strengthen relationship and build trust
Staff of the company struggles to use C3S	People Risk	2	3	6	Providing training and resources for the staff
User data privacy concerns	Regulatory risk	1	3	3	Implementing data protection and encryption measures into C3S
Entering incorrect and incomplete data	Operational risk	2	3	6	Implementing validation checks
Difficulties in measuring ROI	Financial Risk	2	2	4	Using analytical tools to track and report on performance
Network and connectivity issues	Operational Risk	1	3	3	Conducting regular network performance tests and optimization
Failure to meet User expectations	Strategic Risk	1	3	3	Involving the user in the development process and conducting regular user interviews
Difficulty integrating C3S with existing systems	Operational Risk	2	2	4	Using standards integration tools to facilitate compatibility
Miscalculations within the app, leading to stock issues (inventory data inaccuracy)	Operational Risk	2	3	6	Implementing error checking and validation mechanisms
New regulations impacting data	Regulatory Risk	1	2	2	Staying informed about the regulatory changes and ensure compliance

privacy or business practices					
Lack of knowledge about C3S by potential suppliers	People Risk	2	2	4	Developing a comprehensive marketing campaigns to educate suppliers, Getting the users to educate their suppliers about the system
Supplier directly interacting with the company instead of connecting via C3S	Operational Risk	2	3	6	Offering discounts for using the system
Payment Delays by Suppliers	Financial Risk	2	3	6	Establishing clear payment terms (monthly and yearly), and notifying both companies and suppliers when the payment period is upcoming
Supplier Turnover Rate	People risk	2	2	4	Having strong communication channels with suppliers
System Downtime and outages	Operational Risk	2	3	6	Having timely maintenance and updates to prevent downtime
Real-time inventory tracking failures	Operational Risk	2	3	6	Implementation of reliable, real-time tracking systems
Risk of suppliers logging in to the system by different usernames	Operational Risk	2	2	4	Companies should first register their company details before signing in to the portal, thus C3S doesn't allow multiple entries

Refer **Appendix 5** for Risk matrix

Project Resources and Constraints

Project Resources

• Project team	• The project team is led by the project manager, who is responsible for overseeing the project's progress, settingtimelines, and managing resources with his leadership, project management, and problem-solving skills (Sabeen Hussain Bhatti, 2021). • And in the project team there should be a business analystto acknowledge the requirements of this portal with analytical thinking.
• Software DevelopmentCompany	• To build the user interface, complete the development ofthe system, and for maintenance and technical support project needs skilled persons in programming, designing HTML, and frameworks (Delroy Chevers, 2021).
• Marketing team	• As a financial resource, digital marketing specialists, and content creators are required to conduct promotional activities and attract target audiences which are suppliersand manufacturing companies (Arvind Rangaswamy, 2020).
• Quality AssuranceTesters	• To ensure the functionality of the system manual testers and automation testers are needed. By aligning attention todetail and programming skills they can identify issues in the system and optimize the functioning (Fatchur Rohman, 2023).
• UI/UX Designers	• The most important resource of our project. Collaborating with the software development company to design the

	prototype and user interface to ensure the outcome meets project/ user requirements (Sama'a Al Hashimi, 2022).
• Technical Writers	• To prepare documentation and user guides for end users of the portal. Therefore, they should be able to write user manuals and troubleshooting guides.
• Training Personnel	• Organize and conduct user training programs to provide support to users in an understandable way to adapt to the system smoothly.
• System Analysts	• To ensure business processes and systems are aligned with the system's objectives, monitor the performance of the system, and provide feedback to the development company.
• Technical Infrastructure	• This includes hardware, software, and networking connections to support the portal. Storing data and managing the database, handling the system requests, testthe system from time to time are done by technical infrastructure.

Constraints

- **Budget –** this includes a limited budget for development, marketing, and promotional activities, infrastructure costs, contingency funds, and operational expenses such as salaries, tools, third- party companies, funds allocated for advertising, and the occurrence of unexpected expenses. This will affect the quality and performance of the portal by adjusting to fit within the budget, limiting the scope of the project, and reducing the ability to handle risks (Ding-Hsiang Huang, 2020).

- **Timeline –** this refers to the deadlines and schedules of completion of the project. The project is scheduled to be two months in duration. During these two months, all the phases of the projectshould be completed, including planning, developing, testing, and launching. The timeline would be longer if the necessary resources were not available. This af-

fects the whole process of the project, impacting costs, creating additional costs, and reducing productivity (Ding-Hsiang Huang, 2020).

- **Compliance –** his involves legal and regulatory requirements to adhere to industrial standards and regulations. To protect data, compliance with laws and regulations to ensure data privacy and security. And meeting industrial standards like ISO for quality management. As the impact of these constraints, implementing compliance and industrial standards creates additional costs. However, non-compliance will result in penalties, fines, and damage to the company's reputation. For example, companies need to adhere to standards like ISO 9000 to ensure developing a robust Quality Management System (QMS) (Ltd, 2024) And there are regulations such as:

    - Electronic Transaction Act No.19 of 2006 to provide legal recognition for digital signatures and certificates (Lanka, 2023).

    - Computer Crime Act No. 24 of 2004.

- **User adoption and awareness –** this involves the target audience not being well-informed about the portal and they are not willing to use it. Not conducting awareness programs, and not creating strategies effectively, will reduce the number of users that use the system. This affects revenue generation and poor UX design can frustrate (Elia Henrichs, 2022).

Project Workflow

Financials

Revenue Generation & Analysis

Pricing for the subscriptions (LKR)

Suppliers

Suppliers - Standard	
Registration Fee	Free
Package 01	3,750.00 Per month
Package 02	43,200 Per Year
Suppliers - Pro	
Package 01	6,500 Per Month
Package 02	76,450 Per Year

Companies

Company - Standard	
Registration Fee	Free
Package 01	11,500.00 Per month
Package 02	128,000 Per Year
Company - Pro	
Package 01	19,500 Per Month
Package 02	228,000 Per Year

Table 3: Subscription payments

- Package 01 targets small to medium-sized suppliers and companies who require essential features within the system. The monthly fee is set to be affordable, encouraging higher subscription rates while package 02 offers a slight discount compared to the monthly fee, attracting suppliers and companies who prefer a one-time annual payment to manage their cash flow better.

Additional Revenue Streams

Company - Suppliers

- The first 9 suppliers are registered for free to encourage initial adoption and build a user base.
- For additional Suppliers, a tiered pricing structure is designed to scale with the company's growth, making it cost-effective for companies to manage increasing numbers of suppliers

Company – Supplier Registration	
First 09 Suppliers	Free
Additional Suppliers	
01-05	LKR 1,500
10-15	LKR 2,800
15-20	LKR 3,950
15-20	LKR 4,700

Table 4: Supplier registration payments

However, when trial period is off, suppliers must pay for subscriptions but is with discounted prices for packages.

Standard	
Package 01	LKR 40,500 Per Year
Package 02	LKR 38,880 Per Year
Pro	
Package 01	LKR 66,300 Per Year
Package 02	LKR 64,982.50 Per Year

Table 5: Packages

Paid Post

Offering urgent and premium posting options allows suppliers to increase their visibility in the system, generating additional revenue.

Year	Urgent	Premium
	Price Per Year	Price Per Year
1	5,100.00	7,350.00
2	5,150.00	7,400.00
3	5,200.00	7,450.00
4	5,250.00	7,500.00
5	5,300.00	7,550.00

Table 6: Paid Posts

Detailed Cash Flow

	Beginning	Year 01	Year 02	Year 03	Year 04	Year 05

Cash Flow Summary

- C3S starts with an initial cash on hand, which is supplemented by substantial cash receipts from various subscription packages offered to suppliers and companies. These subscriptions, both standard and pro, provide a steady and increasing stream of income over the years. Additionally, the project generates extra revenue through company-supplier registrations and paid posts, further enhancing the cash inflow.

Year	Amount
Beginning	LKR 429,500
01	LKR 105,701,822.50
02	LKR 226,881,195
03	LKR 357,679,217.50
04	LKR 501,217,550
05	LKR 654,384,942.50

Table 7: Cashflow summary

Profitability – Initial Investment recovery analysis & plan

Profit or Loss Analysis – Income Statement

- The total sales revenue for the project is substantial, driven primarily by subscription fees from suppliers and companies. The cost of sales remains minimal, demonstrating efficient operational management. Marketing and research and development expenses are kept within reasonable limits, ensuring continued growth and innovation without overspending. General and administrative expenses, along with other operating expenses, are also carefully controlled to maintain financial health.

C3S Project	
PROFIT AND LOSS STATEMENT	
Total Sales Revenue	105,472,323
Total Cost of Sales	800,000
Total Sales and Marketing Expenses	150,000
Total Research and Development Expenses	330,000
Total General and Administrative Expenses	200,000
Total Other Operating Expenses	110,000
Other Income	2,759,500
Gross Profit	**104,672,323**
Total Operating Expenses	**790,000**
Income from Operations	**2,759,500**
Net Profit	**106,641,823**

Table 8: Income Statement

- Additional income from other sources significantly boosts the overall financial performance, contributing to a high gross profit. The project maintains low operating expenses, leading to a strong income from operations. Ultimately, the net profit is substantial, showcasing the project's ability to generate significant returns while effectively managing costs.
- This positive financial outlook indicates that the C3S project is well-positioned for sustainable growth and long-term success, providing confidence to stakeholders and ensuring financial stability.

Cost Benefit Analysis

- **Expenses management** - The project incurs initial setup and development costs, Annual operational costs covering salaries, maintenance, and marketing, along with general administrative expenses and other miscellaneous costs. These expenses are necessary to ensure the smooth operation and promotion of the system.
- **Benefits**: The primary benefit is substantial revenue generation from subscription fees paid by suppliers and companies, Additional income derived from company-supplier registrations and paid posts.

The CBA shows that the total benefits significantly outweigh the costs. The project achieves a strong positive cash flow and profitability, just as reflected in the Profit and Loss statement.

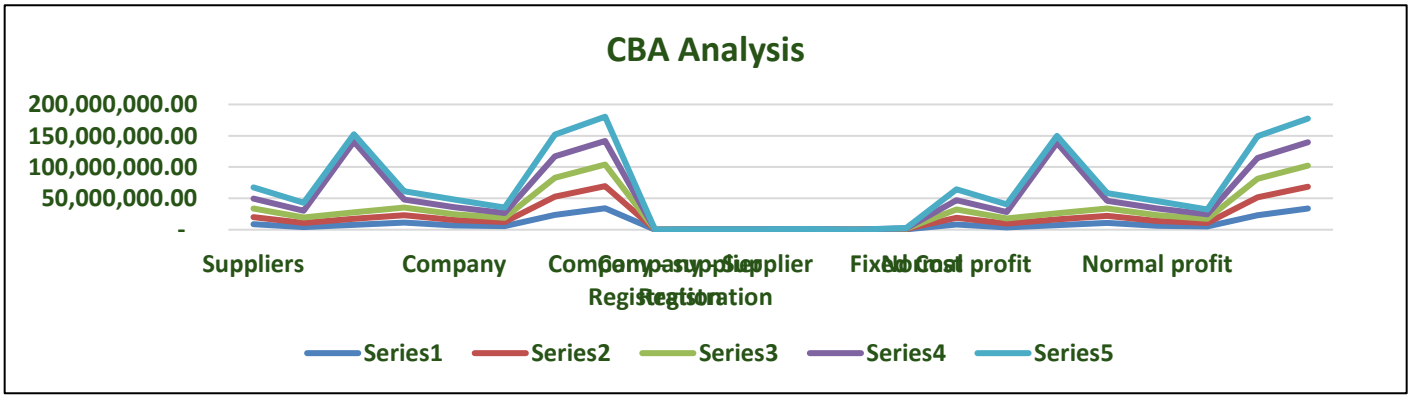

Figure 36: CBA Analysis

Break Even Point

The Break-Even Point (BEP) is the number of subscription units to be sold to cover the project's fixed costs.

Fixed Costs: The total fixed costs for the project amount to LKR 570,500. This includes initial investment expenses for system development and deployment and likewise.

Revenue per Unit: The project offers various subscription packages for suppliers and companies, with different pricing for standard and pro packages. The weighted average revenue per unit is calculated to be approximately LKR 18,020.37. This average considers the mix of monthly and annual subscriptions across different packages.

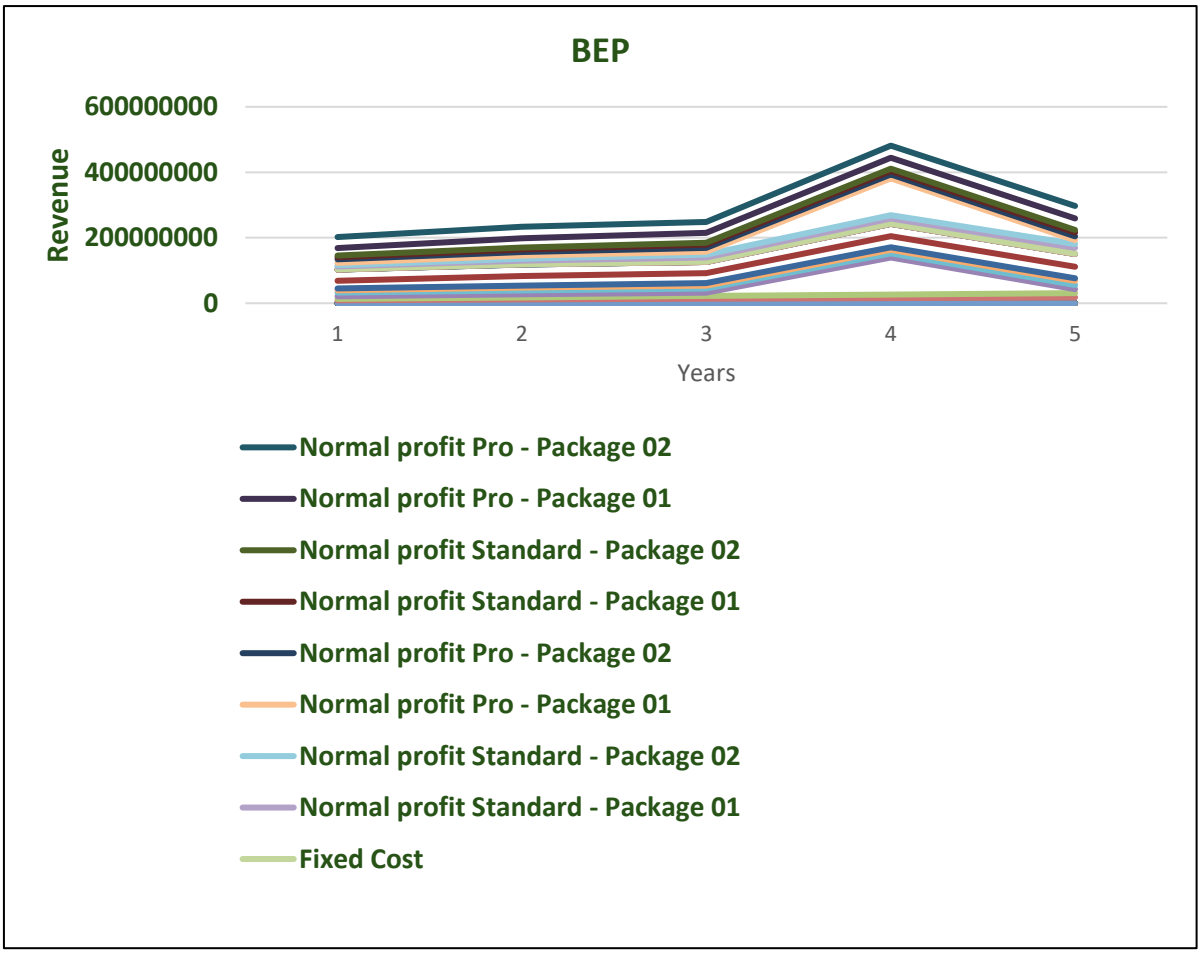

Figure 37: BEP

BEP is calculated with these inputs and has showcased the output stating that the project needs to secure approximately 32 subscription units to break even.

Achieving the BEP of 32 units indicates that the project will cover all its fixed costs, ensuring no financial loss. Beyond this point, any additional subscriptions will contribute to profit, enhancing the project's financial stability and supporting its growth objectives.

For more detailed information Refer **Appendix 6**

Conclusion

The C3S Portal Platform is a breakthrough for Heritage Lanka Pvt Ltd, tackling the key challenges the company has faced with its supply chain. By bringing in advanced technology, C3S makes communication smoother, keeps inventory up to date in real-time, and streamlines order processing. This means better efficiency and more transparency, helping everyone make smarter decisions.

C3S is designed to be user-friendly, with features that help Heritage Lanka build stronger relationships with suppliers, avoid stockouts, and keep costs under control. With this platform in place, Heritage Lanka can stay ahead of the competition, making sure they always have the right products available when needed.

In summary, C3S isn't just a tech upgrade; it's a vital tool that boosts Heritage Lanka's reliability and efficiency. By simplifying and automating supply chain tasks, C3S helps the company meet production needs, use resources wisely, and continue to succeed in the market.

Appendix 02 – Empathy Map

Empathy Map

Name: Project SyncBlend

What does she think and feel?

Thinks

- What effect will these stock outs have on our customer orders and manufacturing schedules?
- How can we resolve this problem if there's a communication breakdown?

Feels

- Disappointment at the continuous disruptions in the supply chain and how they affect operations.
- Guilt feeling on cutting off suppliers due to personal connections
- Disappointments for not being able to satisfy customers accordingly due to late productions.

What does she hear?

- complaints over the time it takes to receive required materials.
- requests for immediate replenishment that are requested.
- Talks inside the company regarding looking at different suppliers.

What does she see?

- Fluctuating inventory levels
- Late deliveries and supplies
- Unreliable delivery schedules
- Miscommunication and decision delays can be caused by ineffective communication routes.

What does she say and do?

Says

- voiced worries about how production schedules would be affected by supply chain interruptions.
- brings up concerns regarding departmental gaps in communication.

Does

- searches for alternate suppliers in coordination with procurement teams.
- Enhances workflows and communication processes by working with cross-functional teams.

Appendix 03 – KT Scope

Key Components	
Objectives	• Competitive advantage • Efficiency in the supply chain • Improve internal and externalcommunication • Better supplier selection andevaluation • Increase profit margins • Time management • Improve efficiency in production
Content	Technical knowledge in designing the interference of the portal
Stakeholders	• Suppliers • Managers • Customers • Competitors • Employees • Government

Methods	• Designing the interface • Training on the portal administration • Communication with the managementand the suppliers • Evaluation • Bidding and selecting suppliers
Timeline	• Team formation - 09.05.2024-15.05.2024
	• Finalizing the company - 16.05.2024-22.05.2024 • Finalizing the problem statement -23.05.2024-29.05.2024 • Prepare the prototype -30.05.2024-05.06.2024 • Finalizing scope deliverables operational costs - 06.06.2024-12.06.2024 • Assigning tasks WBS and resources -13.06.2024-19.06.2024 • Getting input from all the stakeholdersrelated to the project 20.06.2024- 26.06.2024 • Conducting the assigned WBS -27.06.2024-03.07.2024 • Conducting the assigned WBS -04.06.2024-10.07.2024

	• Submitting the solution 11.07.2024- 17.07.2024
